#### **Authorisation**

In accordance with Part 3 Division 4 of the *Rural Fires Act 1997*, this Plan has been prepared by the Northern Rivers Bush Fire Management Committee and has been endorsed at the BFMC meeting on 25 February 2021 for submission to the Bush Fire Coordinating Committee.

Recommended

Robert Graham

On behalf of the

Chairperson

Northern Rivers Bush Fire Management Committee

**Approved** 

Northern Rivers Bush Fire Risk Management Plan 2021

W Bush Fire Coordinating Committee

# **Amendment List**

Ame	ndment	Entered			
Number	Date	Signature	Date		

# **Glossary**

**Assets:** anything valued by the community which includes houses, crops, heritage buildings and places, infrastructure, the environment, businesses, and forests, that may be at risk from bush fire.

**APZ (Asset Protection Zone):** Asset Protection Zones provide fuel reduced areas around assets or groups of assets which are adjacent to bush fire hazards. APZs generally contain highly modified vegetation to reduce the radiant heat impact during a fire, and provide a defendable space to allow residents and fire fighters to operate after the passage of the fire front.

**Bush Fire:** a general term used to describe fire in vegetation, includes grass fire.

**Bush Fire Hazard:** the potential severity of a bush fire, which is determined by fuel load, fuel arrangement and topography under a given climatic condition.

**Bush Fire Risk:** the chance of a bush fire igniting, spreading and causing damage to the community or the assets they value.

**Bush Fire Risk Management:** a systematic process that provides a range of treatments which contribute to the wellbeing of communities and the environment, which suffer the adverse effects of wildfire/bush fire.

**Bush Fire Threat:** potential bush fire exposure of an asset due to the proximity and type of a hazard and the slope on which the hazard is situated.

**Consequence:** outcome or impact of a bush fire event.

**Display area:** geographic area determined by the Bush Fire Management Committee which is used to provide a suitable area and scale for community participation and mapping display purposes.

**Fire Fighting Authorities:** the NSW Rural Fire Service, NSW Fire Brigades, the National Parks and Wildlife Service and Forests NSW.

**LMZ (Land Management Zone):** Land Management Zone.

**Likelihood:** the chance of a bush fire igniting and spreading.

**Major Bush Fire:** A bush fire which requires the attendance of multiple brigades, or causes damage to property or injury to one or more persons.

**NSP** (Neighbourhood Safer Place): A place of last resort during bushfires, for when a bush fire survival plan has failed. Not necessarily a place of safety.

**Recovery costs:** the capacity of an asset to recover from the impacts of a bush fire.

**Risk Acceptance:** an informed decision to accept the consequences and the likelihood of a particular risk.

**Risk Analysis:** a systematic process to understand the nature of and to deduce the level of risk.

Risk Assessment: the overall process of risk identification, risk analysis and risk evaluation.

**Risk Identification:** the process of determining what, where, when, why, and how something could happen.

**Risk Treatment:** the process of selection and implementation of measures to modify risk.

RLC (Rural Land Sharing Community): Formerly known as Multiple Occupancies.

**SFAZ (Strategic Fire Advantage Zone):** Strategic Fire Advantage Zones are land that is mapped or described as such in a bush fire risk management plan. They provide an advantage to fire fighters by having a fuel-reduced area that may slow the movement of fire.

Vulnerability: the susceptibility of an asset to the impacts of bush fire.

# **Chapter 1. Introduction**

#### 1.1 Background

Under the *Rural Fires Act 1997* the Bush Fire Coordinating Committee (BFCC) must constitute a Bush Fire Management Committee (BFMC) for each area in the State, which is subject to the risk of bush fires. Each BFMC is required to prepare and submit to the BFCC a draft Bush Fire Risk Management Plan (BFRMP).

A BFRMP is a strategic document that identifies community assets at risk and sets out a five-year program of coordinated multi-agency treatments to reduce the risk of bush fire to the assets. Treatments may include such things as hazard reduction burning, grazing, community education, fire trail maintenance and establishing community fireguard groups.

Annual programs to implement the treatments identified in this plan will be undertaken by the relevant land managers and fire fighting authorities.

In exercising its functions under the *Rural Fires Act 1997*, including the preparation of a draft bush fire risk management plan, the Northern Rivers BFMC is required to have regard to the principles of ecologically sustainable development (ESD).

This document and the accompanying maps together form the BFRMP for the Northern Rivers BFMC area.

This BFRMP has been prepared by the Northern Rivers BFMC and covers both public and private lands. This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC.

The BFCC recognises that climate change has the potential to increase bush fire risk. The risk assessment process applied in this BFRMP is based on current climatic conditions. The BFCC will monitor information on climate change and will modify the process when necessary.

# 1.2 Aim and Objectives

The **aim** of this BFRMP is to minimise the risk of adverse impact of bush fires on life, property and the environment.

The **objectives** of this BFRMP are to:

- reduce the number of human-induced bush fire ignitions that cause damage to life, property and the environment;
- manage fuel to reduce the rate of spread and intensity of bush fires, while minimising environmental/ecological impacts;
- reduce the community's vulnerability to bush fires by improving its preparedness; and
- effectively contain fires with a potential to cause damage to life, property and the environment.

#### 1.3 Description of the Northern Rivers BFMC Area

#### 1.3.1 Location and land tenure

The Northern Rivers BFMC area is located in the far north east of New South Wales and includes the Local Government Areas of Kyogle, Lismore and Richmond Valley.

The area covered by the Northern Rivers BFMC is 795,502 hectares and includes the land tenures outlined in Table 1.1.

Land Manager*	% of BFMC area
National Parks & Wildlife Service	14.89
Forests NSW	11.55
Department of Lands	2.79
Private and all other	70.77

**Table 1.1 Land Tenure** 

#### 1.3.2 Climate and bush fire season

The typical / average climate in the Northern Rivers BFMC area is warm subtropical with a well-defined summer / autumn rainfall peak (January to March) and a dry winter and spring. The climate in forested areas at higher altitudes tends towards warm temperate. The temperature and rainfall conditions vary across the district. The rainfall can be unreliable during the late winter / spring period, particularly on the lower altitude landforms.

The bush fire season generally coincides with strong south-west to north-west winds, which tend to prevail during late winter / spring (August / September) and often result in very high to severe fire danger days, particularly where the drought indices are low. The majority of serious bush fires occur from this period until the onset of summer rains, which normally start from December and continue through to autumn. Longer fire seasons are experienced when summer rainfall is lower than normal, with the bush fire season extending through summer to early autumn.

The Northern Rivers BFMC area commences its Bush Fire Danger Period on the 1st of September each year in recognition of a typical early onset of bush fire dangers across the region. This is one month earlier than the statutory period. In a typical year, the Bush Fire Danger Period generally ends in February due to typically high rainfall that occurs in the late summer months. This is assessed by the BFMC each year and varied as required.

#### 1.3.3 Population and demographic information

The population of the Northern Rivers BFMC area is approximately 75,000 people. The major population centres are Lismore, Casino and Kyogle.

The region's population is increasing at a rate of about 0.6% per annum. Major employment sectors include retail, tourism, health and community services, manufacturing, education, business services and agriculture. Industry sectors such as education, media and creative industries, horticulture, residential development, forestry, meat and dairy, and aquaculture are emerging as areas with strong growth prospects.

The major agricultural commodities produced in the Northern Rivers include dairy, tropical fruits, cattle, poultry, plantation forests, soy bean, sugar cane and aquaculture. In recent years, many new and niche agricultural operations have emerged in the region.

The following key issue has been identified within the Northern Rivers BFMC area as potentially impacting on the ability of certain sections of the community to prepare themselves for bush fire: Rural land sharing communities and isolated rural residential type settlements which are generally located in more remote areas of bushland. The relative bush fire hazard is often high and access limited. The lack of bush fire protection strategies combined with low or sub-standard building designs is a common characteristic. In the absence of adequate bush fire management practices, it is considered that a severe bush fire could significantly impact on some of these developments resulting in loss of assets and possible loss of life.

#### 1.3.4 History of bush fire frequency and ignition cause

The Northern Rivers BFMC area has around 120 bush fires per year, of which 7 on average can be considered to be major fires.

The main sources of ignition in the Northern Rivers BFMC area are:

- Pre-bush fire danger period burns;
- Illegal burning off;
- Arson;
- Escapes from legal burning off; and
- Lightning.

The 2019/2020 bush fire season was one of the worst on record with nearly 48% of the Richmond Valley LGA experiencing fire. The Northern Rivers (along with most of NSW) was severely drought-affected, with wet sclerophyll vegetation in the Mt Nardi area also affected by fire.

# Chapter 2. Identifying and Assessing the Bush Fire Risk

#### 2.1 Process

The Australia/New Zealand Standard *AS/NZS 4360: 2004 Risk Management* was used as the basis for the risk assessment process. See Figure 2.1 for the steps involved. For a detailed description of the process undertaken see the Bush Fire Risk Management Planning Guidelines for Bush Fire Management Committees on the RFS website: <a href="https://www.rfs.nsw.gov.au">www.rfs.nsw.gov.au</a>.

Figure 2.1 Overview of the risk assessment process

#### 2.2 Communication and Consultation

Community participation is an integral part of risk management. The Community Participation Strategy involved developing and implementing a process to address the needs, issues and concerns of stakeholders within the BFMC area in regards to the BFRMP. See Appendix 1 for the Community Participation Strategy used by the Northern Rivers BFMC in preparing this BFRMP.

# 2.3 Identifying the Bush Fire Risk

Identifying the level of bush fire risk firstly involved identifying important community assets considered to be at risk from bush fire in the Northern Rivers BFMC area, and then assessing the likelihood and consequence ratings.

#### **2.3.1 Assets**

BFMC members and the community, including RFS volunteers, identified assets within the Northern Rivers BFMC that they believed were at risk of bush fire.

The assets were divided into four asset types:

#### **Human settlement**

- Residential areas including urban bushland interface areas and rural properties;
- Special Fire Protection areas including schools, hospitals, nursing homes, and tourist facilities;
- Other human settlement areas including commercial and industrial areas where distinct from major towns; and
- Neighbourhood Safer Place (NSP) is defined by the Rural Fires Act 1997 as land or a building designated as a neighbourhood safer place under section 62C. NSPs provide a place of last resort for people during a bush fire. All designated NSP locations for NSW are available at www.rfs.nsw.gov.au.

#### **Economic**

- Agricultural; e.g. major silos, regional saleyards, cropping/grazing land;
- Commercial/industrial e.g. major industries, waste treatment plants, sawmills;
- Infrastructure e.g. large power lines, gas and oil pipelines, railway lines, electricity substations, communication facilities;
- Tourist and recreational e.g. tourist sites and facilities, resorts, retreats;
- Mines;
- Commercial forests e.g. pine plantations, eucalypt plantations and commercial native forests; and
- Drinking water catchments.

#### **Environmental**

- Threatened species, populations and ecological communities and Ramsar wetlands;
- Locally important species and ecological communities, such as species and ecological communities especially sensitive to fire.

#### Cultural

- Aboriginal significance Aboriginal places and items of significance;
- Non-indigenous heritage places and items arising from the early occupation of NSW by European or other non-indigenous settlers; and
- Other cultural assets community halls, clubs and recreational facilities.

See Appendix 2 for the full list of assets identified in the Northern Rivers BFMC area. See maps 1-3 for the location of assets to be treated under this BFRMP.

#### 2.3.2 Assessing the Bush Fire Risk - Consequence

Once the assets were identified, the consequence of a bush fire impacting on these assets was assessed.

See Appendix 2 for the consequence ratings assigned to each asset identified in the Northern Rivers BFMC area.

The different asset types had different assessment processes used to determine the consequence. These processes are identified below.

#### **Human settlement**

A potential fire behaviour model using vegetation type, slope and separation distance was used to produce a threat rating for human settlement assets. The vulnerability of the asset to a bush fire was also assessed and a rating assigned. These ratings were then used to assess the consequence of a bush fire impacting upon a human settlement asset.

Special Fire Protection (SFP) assets were considered inherently more vulnerable to bush fire due to mobility capacity, knowledge or other issues relating to their inhabitants, (e.g. the elderly, infirm, children or tourists) and therefore stricter requirements for vulnerability assessment and rating were applied. Due to circumstances surrounding NSPs and their use during a bush fire, stricter requirements for vulnerability assessment and rating will also apply to these assets.

#### **Economic**

The level of economic impact e.g. local, regional or state, as well as the economic recovery costs (how long and complicated a financial recovery will be) of the asset were identified. These ratings were used to assess the consequence of a bush fire impacting upon an economic asset.

#### **Environmental**

Environmental assets with known minimum fire threshold were assessed to determine if they were at risk of a bush fire within the 5 year life of the BFRMP using fire history data. Those environmental assets which were within or above the fire threshold were not assessed in the BFRMP, as the negative impact of a fire within the 5 year period was determined as being low and may even be of benefit to the asset and surrounding habitat.

The vulnerability of an environmental asset was determined by its conservation status and its geographic extent (distribution across the landscape). Vulnerability and potential impact of bush fire were used to assess the consequence of a bush fire impacting upon an environmental asset.

#### Cultural

For non-indigenous historical, Aboriginal and other cultural assets a potential fire behaviour model using fuel load, slope and proximity was used to produce a threat rating. The physical vulnerability of the asset to a bush fire was also assessed. These ratings were then used to assess the consequence of a bush fire impacting upon a cultural asset.

#### 2.3.3 Assessing the Bush Fire Risk - Likelihood

For all asset types the likelihood of a bush fire occurring was assessed. This involves considering fire history, including ignition cause and patterns, known fire paths, access, containment potential and potential fire run (size of the vegetated area). See Appendix 2 for the likelihood ratings assigned to each asset identified in the Northern Rivers BFMC area.

#### 2.3.4 Identifying the level of risk

The consequence and likelihood ratings were then used to identify the level of risk. See Appendix 2 for the risk ratings assigned to each asset identified in the Northern Rivers BFMC area.

#### 2.3.5 Evaluating the Bush Fire Risk

Once the risk ratings for each asset were identified, they were evaluated to:

- a) confirm that risk levels identified in the risk analysis process are appropriate and reflect the relative seriousness of the bush fire risk;
- b) identify which assets require treatments; and
- c) identify treatment priorities.

#### 2.3.6 Prioritising Treatments

No organisation has limitless resources to deal with adverse risk. It is therefore necessary to define priorities. The bush fire risk ratings determined were used to prioritise the risk treatments, i.e. areas of extreme risk were considered first for treatment, then very high, then high then medium then low.

#### 2.3.7 Risk Acceptability

Risks below a certain level were assessed as not requiring treatment within the life of this plan. This is due to a combination of risk priority and capacity to undertake the works. Within the Northern Rivers BFMC area the level of acceptability is medium. Areas of medium or low risk are likely to be managed by routine procedures and so do not require a specific application of resources.

All NSPs for a BFMC area will require ongoing treatment by the applicable land owner to ensure that the asset remains viable as a place of last resort for people during a bush fire. Therefore, all NSP assets are allocated specific treatments in this Plan, regardless of the level of bush fire risk identified and the risk acceptability nominated by the Northern Rivers BFMC.

# **Chapter 3. Treating the Risk**

#### 3.1 Bush Fire Management Zones

Bush Fire Management Zones were identified within the Northern Rivers BFMC area and mapped (see maps 1-3). These zones identify the fire management intent for a specific area. See Table 3.1 for descriptions of the zones and their purposes. The four categories of Bush Fire Management Zones are:

- Asset Protection Zone (APZ);
- Strategic Fire Advantage Zone (SFAZ);
- Land Management Zone (LMZ); and
- Fire Exclusion Zone (FEZ).

Some of these zones (usually Land Management Zones) may be further classified within this category by the land manager, e.g. LMZ - Heritage Management Zone (NPWS).

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of <b>Direct Attack</b> suppression strategies within the zone.  To minimise bush fire impacts on undefended assets.	As per RFS document Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the speed and intensity of bush fires, and reduce the potential for spot fire development; To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of:  Parallel Attack suppression strategies within the zone. and/or Indirect Attack (back burning) in high to very high fire weather conditions within the zone.  To reduce the likelihood of: Crown fire development within the zone. and/or Spot fire ignition potential from the zone.	Zone width related to suppression objectives and dependent upon:  Topography Aspect Spotting propensity Location of adjacent firebreaks Mosaic pattern of treatment Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan.  Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
Land Management Zone	To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.	As per the land management and fire protection objectives of the responsible land management agency.  To reduce the likelihood of spread of fires.  To undertake mosaic burning	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
Fire Exclusion Zone	To exclude bush fires.	N/A	Variable dependant on size of fire sensitive area requiring protection.

Table 3.1 Bush Fire Management Zones: Purpose, objectives and characteristics

NB: OFH refers the Overall Fuel Hazard Guide as described in the document published by (Dept. of Sustainability and Environment 3<sup>rd</sup> ed. 1999 & NPWS version); State-wide procedures for assessment of fuel hazard will be developed in conjunction with the BFCC.

**Note:** All areas that are not mapped or described as APZs or SFAZs are considered as LMZs.

\*For the purpose of the Bush Fire Environmental Assessment Code:

- 1. Plantations that are approved under the *Plantations & Reafforestation Act 1999* after closure of the public exhibition period for this BFRMP are considered to be identified in this BFRMP; and
- Retained vegetation within the aforementioned plantations is considered to be a Strategic Fire Advantage Zone identified in the text of this BFRMP as long as it meets the suppression objectives for SFAZs included in the BFRMP, and is not mapped or otherwise described as a Fire Exclusion Zone in the BFRMP.

#### 3.2 BFMC Wide Treatments

BFMC wide treatments are activities which reduce the overall bush fire risk within the BFMC area and are undertaken on an ongoing basis as part of normal business. These treatments are not linked to specific assets in the BFRMP, rather they are applied across all or part of the BFMC area as designated by legislation or agency policy. BFMC wide treatments include the following:

#### Reviewing the bush fire prone land map

These maps identify bush fire prone land and are used to trigger whether a development application is assessed using *Planning for Bush Fire Protection*<sup>1</sup>.

• Ensuring developments in bush fire prone land comply with *Planning for Bush Fire Protection* 

This assessment process requires new applications for development to include bush fire protection measures.

 Using the Local Environment Plan/s (LEPs) to control developments in areas with a bush fire risk

LEPs can be used to exclude development in extreme bush fire risk areas or where bush fire protection measures cannot be incorporated.

Varying the standard bush fire danger period as required

In years where the weather is particularly adverse the bush fire danger period may be brought in early or extended. This is assessed every year by the BFMC.

Requiring permits during the bush fire danger period

\_

<sup>&</sup>lt;sup>1</sup> NSW Rural Fire Service 2019 *Planning for Bush Fire Protection: A guide for councils, planners, fire authorities and developers.* 

In the bush fire danger period a fire safety permit is required to light a fire in the open. Permits specify conditions such as fire fighting equipment that must be on site, or restrict burns based on weather conditions.

#### Prosecution of arsonists/offenders

Under the *Rural Fires Act 1997* persons may be prosecuted for breaching the conditions on a fire permit, lighting a fire during a Total Fire Ban, allowing fire to escape their property, or other breaches of the Act.

#### Investigation of bush fire cause

All bush fires which do not have a known cause are investigated to identify how they started.

#### Normal fire suppression activities

Responding to bush fire is a normal business activity for the fire fighting authorities.

#### Assessing and managing compliance with strategic fire fighting resource allocation provisions

Strategic fire fighting resource allocation provisions is the process used to identify the number of stations, brigades and appliances required in an area, and considers members, training, assets and hazards.

#### • Preparation of a S52 Operations Coordination Plan

The Operations Coordination Plan is prepared biannually and sets out how coordinated fire fighting will occur. It includes specific operational restrictions on fire fighting techniques in certain areas, where fires will be managed from, and how agencies involved can communicate during operations.

#### Fire Management Plans or Plans of Management

Some land management agencies have developed fire management plans or plans of management with specific fire or fuel management strategies, for example a Forests NSW Regional Fuel Management Risk Plan, a NPWS Fire Management Strategy. These publicly exhibited plans form the basis for operational fire planning on public parks, reserves and forests.

#### Bush Fire Hazard Complaints

If someone is concerned about possible bush fire hazards on a neighbouring property or any other land, then this can be reported to the RFS Commissioner or their local RFS Fire Control Centre. The complaint will be investigated and may result in a notice being issued to the landowner or manager to reduce the hazard.

#### 3.3 Asset Specific Treatments

There are five broad strategy groups available to treat the bush fire risk to assets identified in the BFRMP.

The types of asset specific treatments in each strategy group used in the Northern Rivers BFMC area are listed below. A full list of the treatment strategies in the Northern Rivers BFMC area are in Appendix 3.

Strategy	Targeted treatments used in the Northern Rivers BFMC area
Ignition Management	Maintain vegetation as per Network Management Plan.
Hazard Reduction	Undertake mosaic burn in SFAZ.
	Undertake mosaic burn in LMZ.
	Inspect APZ(s) annually and maintain as required.
	Inspect SFAZ annually and maintain as required.
	Manage vegetation to reduce fuel load.
	Maintain fuels in accordance with Guidelines.
Community	Undertake community engagement activities.
Education	Develop, maintain and promote CPP.
Property Planning	Develop/implement/review bushfire emergency plan.
	Maintain building if required by inspection.
Preparedness	Inspect trails annually and maintain as required Manage facilities to reduce risk.

Table 3.2 Asset specific treatments used in the Northern Rivers BFMC area

#### 3.4 Fire Thresholds

The vegetation in the Northern Rivers BFMC area was classified into fire threshold categories (Table 3.3).

Vegetation formation	Minimum SFAZ Threshold	Minimum LMZ Threshold	Maximum Threshold	Notes
Rainforest	NA	NA	NA	Fire should be avoided.
Alpine complex	NA	NA	NA	Fire should be avoided.
Wet Sclerophyll forest (shrubby subformation)	25	30	60	Crown fires should be avoided in the lower end of the interval range.
Wet Sclerophyll forest (grassy subformation)	10	15	50	Crown fires should be avoided in the lower end of the interval range.
Grassy woodland	5	8	40	Minimum interval of 10 years should apply in the southern Tablelands area. Occasional intervals greater than 15 years may be desirable.
Grassland	2	3	10	Occasional intervals greater than 7 years should be included in coastal areas. There was insufficient data to give a maximum interval; available evidence indicates maximum intervals should be approximately 10 years.
Dry sclerophyll forest (shrub/grass subformation)	5	8	50	Occasional intervals greater than 25 years may be desirable.
Dry sclerophyll forest (shrub subformation)	7	10	30	Occasional intervals greater than 25 years may be desirable.
Heathlands	7	10	30	Occasional intervals greater than 20 years may be desirable.
Freshwater wetlands	6	10	35	Occasional intervals greater than 30 years may be desirable.
Forested wetlands	7	10	35	Some intervals greater than 20 years may be desirable.
Saline wetlands	NA	NA	NA	Fire should be avoided.
Semi-arid woodlands (grassy subformation)	6	9	No max	Not enough data for a maximum fire interval.
Semi-arid woodlands (shrubby subformation)	10	15	No Max	Not enough data for a maximum fire interval.
Arid shrublands (chenopod subformation	NA	NA	NA	Fire should be avoided.
Arid shrublands (acacia subformation)	10	15	No Max	Not enough data for a maximum fire interval.

**Table 3.3 Fire Thresholds for Vegetation Categories** 

# 3.5 Annual Works Programs

The land management agencies and fire fighting authorities responsible for implementing the treatments identified in this plan will include those treatments in their annual works programs detailing how, when, and where the required activities will be undertaken.

#### 3.6 Implementation

When the treatments identified in this BFRMP are implemented there are a number of issues that need to be considered by the responsible agency including environmental assessments and approvals, smoke management and prescribed burn plans.

#### Local permit issuing/hazard reduction burning exclusion periods

In the Northern Rivers BFMC area the issuing of permits for non-essential activities is not permitted during the week prior to Christmas to the Monday after New Year.

This decision is taken due to the increased risk of fires escaping and threatening the community which consistently increases in numbers thought the bush fire prone areas of the Zone.

# **Chapter 4. Performance Monitoring and Reviewing**

#### 4.1 Review

This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC. The Northern Rivers BFMC will also review this plan as necessary to account for any changes in context or risk. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

#### 4.2 Monitoring

The BFMC is required to monitor progress towards the completion of treatment works listed in the BFRMP, and the timeliness of the works.

#### 4.3 Reporting

The BFMC is required to report annually to the BFCC on its progress in implementing the bush fire risk management activities identified in this plan.

#### 4.4 Performance Measurements

State wide performance measurements which are linked to the BFRMP have been identified by the BFCC. All BFMCs must use these to monitor and report on their success in reducing the bush fire risk in their BFMC area.

#### Northern Rivers BFMC Bush Fire Risk Management Plan 2021

Lismore - Map Display Area Map 2 of 3

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Northern Rivers. Bush Fire Management Committee (BFMC) pursuant to section 52 of the *Rural Fires Act* 1997.

The alm of this BFRMP is to reduce the adverse impact of bush fires on Me, property and

- The objectives of this BFRMP are to:

   reduce the number of human-induced boush fire ignitions that cause damage to life, properly or tr
   readuce the number of human-induced boush fire while miniming environmental/eco
   manage fact for enduce the spread and intensity of boush fires while miniming environmental/eco
   reduce the community's vulnerability to bush fires by improving as preparedress; and
   reduced the community's vulnerability to bush fires by improving as preparedress; and
   reduced very call fires with a potential to cause damage to file. property and the environment.

Review
Under the Rural Fires Act 1997 this plan must be reviewed and updated within each successive five year period
following the constitution of the BPMC. The Northern Rivers BPMC will also review this plan as necessary. This may
changes to the BPMC area, organisational reportabilities or legislation;
changes to the BPMC area, organisational reportabilities or legislation;
following a major fire event,

Note on LMZ: All areas not specifically mapped as an APZ, SFAZ or FEZ are considered as LMZ for this risk management plan. For areas identified by an LMZ polygon on the map, please refer to the BFRMP document for the

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values,	To enable the safe use of Direct Attack suppression strategies within the zone, To minimise bush fire impacts on undefended assets.	As per RFS document Standards for Assel Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the speed and intensity of bush fires, and reduce the potential for spot fire development. To aid containment of wildfires to existing management boundaries.	To improve the škelihood and safe use of:  Parallel Attack suppression stratepies within the zone, and/or lindirect Attack (back burning) in high to very high fire weather conditions within the zone.  To reduce the likelihood of. Crown fire development within the zone, and/or Spot fire ignition potential from the zone.	Zone with related to suppression objectives and dependent upon:  - Topography - Aspect - Topography - Aspect - Topography - Location of selected fireheats - Location of selected fireheats - Mosaic patien of treatment - Assess Overal Fuel Nazard (OPH) once vegetation communities reset
Land Management Zone	To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.	As per the land management and free protection objectives of the responsible land management agency. To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management e.g., hertage and/or fire protection e.g. broad scale mosaic burning objectives.
Fire Exclusion Zone	To exclude bush fires.	N/A	Variable dependant on size of fire sensitive area requiring protection.
